

ECOLOGICAL BURIAL CONTRACT

The parties to this contract (hereafter "the Contract") are:

SUPERFLEX, Blågårdsgade 11b, 2200 Copenhagen, Denmark, (hereafter "SUPERFLEX")

and

[_____], (hereafter "the Client")

Contract Period

The Contract enters into effect on the date of signature by the parties. The Contract lasts from December 7 to December 18 2009 during the UN Climate Change Conference in Copenhagen.

Purpose of the Contract

By signing the Contract you commit yourself to an ecological and climate friendly burial in the case of death during the 12 days of the UN Climate Change Conference.

Obligation of the Client

The Client must return the Contract to New Life Copenhagen (c/o Wooloo Productions, Pasteurvej 46, Ny Tap, 5. floor, Room 8, 1778 Copenhagen V, Denmark) and furthermore keep one signed copy in a safe place or with a relative. In case of death of the Client during the Climate Change Conference, the Contract is handed over to Promessa Organic AB, Sweden, who will facilitate the ecological burial.

Ecological Burial

Promession is a new burial concept based on a cautious and careful freeze-drying of the dead body, enabling our remains to become soil within a couple of years. In an ecological process, the body of the dead person is frozen using what is known as cryo-technology. The body is placed in a casket and cooled. The temperature is reduced further using liquid nitrogen, which makes the body brittle making it turn to dust with vibration. The dust is dried and any metals such as dental amalgam is separated out. The dried dust is placed in a biodegradable casket and buried in the biodegradable casket at a depth of about half a metre where there is available air, moist and biodegraders who will turn the body and casket into loam within a year. Promession is developed by Swedish biologist, Susanne Wiigh-Mäsak, and is managed within the framework of Promessa Organic AB. The technology is currently in its final development phase and is expected to be implemented in 2010.
